

# Environment

**Our commitment to the environment** is to responsibly develop our assets in a way that protects the air, land and water around our operations. We focus on minimizing spills, reducing emissions, preserving air quality, reducing water use and increasing our abandonment and reclamation activity.

## Highlights

Achieved 76% reduction in the volume of reportable spills over the past five years

Commissioned a gas processing plant in Peace River that increased routine gas conservation in the area to 99.1%

.....

## Challenges

Increased freshwater use as we added production that requires fracking

Increased levels of venting associated with Saskatchewan properties

.....

## Looking Forward

Work towards our emissions reduction target

Install automated leak detection systems for selected pipelines, to enhance early detection and shutdown

Initiate two area-based abandonment/reclamation pilot projects in Saskatchewan

.....
